

Case Study: Policy Design and Systems Reform

RCT Impact Evaluation Safety Intervention

CLIENT

KEY ROLE

Led the end-to-end design and execution of a large-scale Randomized Control Trial (RCT) baseline study. This study assessed the impact of gender-based violence on women's mobility, vocational training access, and labor market aspirations.

KEY HIGHLIGHTS

Designed and guided a tech-based safety intervention. Led data collection on GBV, mobility, and empowerment, navigating major field disruptions to generate policy-relevant insights linking safety and skilling.

FEMALE TRAINEES

IMPACT

Built India's first large-scale evidence base linking public safety to skilling outcomes for young women, informing the World Bank's engagement with MSDE and shaping interventions to boost female participation in training and the workforce.
